

Carson Woodfin

St. Louis, MO | carsonw@wustl.edu

PROFESSIONAL SUMMARY

Clinical Research Coordinator II with experience in Alzheimer's disease, anti-amyloid therapy, clinical research operations, and real-world data analysis within an academic memory clinic setting. Skilled in developing clinic-to-research workflows, coordinating longitudinal research activities, supporting registry and sponsor-driven projects, and collaborating across physicians, research teams, and external partners. Background includes neurocognitive assessment, participant and caregiver engagement, regulatory documentation, data quality oversight, and multi-site clinical research coordination.

Combines patient-facing research experience with training in data analytics, including R, statistical modeling, and data visualization, to examine questions related to treatment receipt, clinical complexity, health equity, and implementation of emerging Alzheimer's therapies. Particularly interested in using real-world clinical data to improve how neurodegenerative disease research and treatment are translated into equitable, patient-centered care.

SKILLS

Data & Research Systems: REDCap, R programming, Python, MS Excel, SPSS, Epic EMR, OnCore CTMS

Real-World Evidence Research: ALZ-NET registry operations, anti-amyloid therapy tracking, AD biomarker/APOE documentation, longitudinal outcomes tracking, QA/QC data regulatory documentation, audit readiness/preparation

Assessment & Memory Care Protocols: Cognitive/Functional Assessments (CDR, UPDRS, MoCA, MMSE, SLUMS, NPI-Q, FAQ),

Research Implementation & Inclusive Engagement: Clinic-to-research workflows, referral pathways, participant outreach, eligibility screening, patient registry management, sponsor/data coordination, recruitment tracking

EDUCATION

Washington University in St. Louis, Certificate in Data Analytics
GPA: 3.81/4.0 (*Dean's List*)

August 2026

Southern Illinois University-Edwardsville, Bachelor of Science in Psychology
GPA: 3.64/4.0, *Cum Laude*

May 2022

EXPERIENCE

Clinical Research Coordinator II, Washington University in St. Louis, *Memory Diagnostic Center* May 2026 – Present

- Serve as a central research contact for the Memory Diagnostic Center, coordinating clinic-to-research workflows across investigators, clinicians, research teams, and external sponsors.
- Coordinate ALZ-NET registry activities, including informed consent, baseline and longitudinal data entry, and quality assurance for patients receiving anti-amyloid therapies.
- Develop research referral, recruitment, and tracking workflows to identify appropriate patients and reduce participant burden within a high-volume memory clinic.
- Collaborate with physicians and MDC leadership to integrate research opportunities into clinical care pathways for patients with Alzheimer's disease and related cognitive disorders.
- Support sponsor- and investigator-initiated research through feasibility planning, data coordination, regulatory communication, and development of study-specific workflows.

Clinical Research Coordinator II, Washington University in St. Louis, *Radiation Oncology* July 2025 – May 2026

- Lead coordination of satellite clinical trial operations for NRG oncology studies (PR24, GU013), managing 80+ participants across three sites and ensuring seamless multi-site execution.
- Manage complex, multi-site patient tracking systems, maintaining protocol adherence, visit window compliance, and accurate longitudinal data across all enrolled participants.
- Facilitate participant enrollment through national trial systems (CTSU), ensuring accurate registration, documentation, and compliance with sponsor and regulatory requirements.
- Prepare and manage study kits and materials for patient visits, ensuring protocol-specific requirements are met and coordinating logistics across multiple clinical sites.
- Serve as a central point of coordination between physicians, research staff, and external partners to maintain protocol compliance and streamline multi-site study operations.
- Monitor ongoing study compliance, proactively identifying and resolving discrepancies in documentation, eligibility, and visit scheduling to ensure audit readiness.
- Delegate study responsibilities across site coordinators, including consenting, study visit execution, and data collection, to ensure efficient and compliant multi-site trial operations.
- Maintain regulatory and source documentation, including drafting and managing note-to-file entries to address protocol deviations, clarifications, and audit-related documentation.

Clinical Research Coordinator I, Washington University in St. Louis, *DRIVES Project* Feb 2024 – July 2025

- Coordinate daily operations of multi-cohort driving studies focused on preclinical Alzheimer's disease.
- Administering cognitive assessments and questionnaires using standardized protocols, including informed consent and plasma collection, for participants enrolled across multiple studies/cohorts.
- Led training and onboarding for new Clinical Research Coordinators, serving as a primary point of contact for cognitive assessments, data management systems, and protocol adherence
- Overseeing the management of data loggers for driving data collection, ensuring participant compliance, coordinating procurement, and collaborating with Azuga Fleet Management to resolve technical issues and optimize study operations
- Collaborating with external sponsors to oversee all stages of clinical studies, including recruitment, study visits, plasma collection and analysis for eligibility, cognitive assessments, and longitudinal participant follow-up to ensure study integrity and compliance.

Carson Woodfin

- Manage all aspects of -80°C freezers, including installing temperature monitors, implementing emergency protocols to safeguard plasma specimens, and coordinating specimen transfers for analysis

Psychometrist, Washington University in St. Louis, *Memory Diagnostic Center*

Feb 2023 – Feb 2024

- Administered standardized cognitive assessments to support diagnostic workups for Alzheimer's disease and related neurodegenerative conditions
- Obtaining and organizing medical imaging and patient records
- Establishing and managing Lecanemab database for infusion candidates
- Coordinating with providers to optimize patient care and workflow development

RESEARCH EXPERIENCE, CONTRIBUTIONS, & PRESENTATIONS

Independent Research Project –*P-Factors and Treatment-Seeking Behaviors*

Lead Investigator, Mentor: Dr. Eunye Ro | 2022

- Designed and executed an independent study on psychopathological risk factors and treatment-seeking behavior in undergraduate populations.
- Drafted IRB submission and study protocols; administered self-report measures via Qualtrics; recruited participants through campus SONA system.
- Conducted statistical analysis in SPSS, including data cleaning, descriptive statistics, and exploratory correlation analysis.
- Presented findings at the Midwestern Psychological Association Conference (MPA), Chicago, IL.

Independent Research Project – *Clinical Complexity, Neighborhood Vulnerability, and Anti-Amyloid Therapy Receipt*

Experiential Learning Data Analytics Capstone, Washington University in St. Louis | 2026

- Conducted an exploratory secondary analysis of 4,758 Memory Diagnostic Center patients examining neighborhood social vulnerability, clinical complexity, and anti-amyloid therapy receipt.
- Developed non-neurologic comorbidity and selected medication burden measures and analyzed treatment receipt across Social Vulnerability Index quartiles using R.
- Applied descriptive analyses mean bias-reduced logistic regression, sequential modeling, and sensitivity analyses to evaluate factors associated with treatment receipt.
- Found that treatment receipt declined with increasing neighborhood vulnerability and higher clinical burden; clinical complexity did not fully account for the neighborhood gradient.
- Presented findings to Memory Diagnostic Center leadership and subsequently to Knight ADRC leadership.
